Subject Index

Adenine derivatives, tetraacetatodiruthenium (II,III) and, 175
Adenosine derivatives, tetraacetatodiruthenium (II,III) and, 175
Albumin, human serum, interaction with rhodium, 187
Alfalfa seeds, ferritin purification and characterization from, 23
Alkaline phosphatase, phosphotransferase activity and, 51
Alligator, tail muscle, parvalbumin isoforms from, 67
Alligator mississipiensis, tail muscle, parvalbumin isoforms from, 67
Aluminum(III), GDP/GTP exchange reaction of *ras* p21 protein and, 99
Amino acids, copper(II) ions binding to DNA and, 131
Antibacterial study, ciprofloxacin, 241
Antimalarial drugs, β-hematin and, 145
Apatites, magnesium-containing carbonate, 1
Aplysia metmyoglobin, heme transfer to apomyoglobin of horse heart, 83
Apomyoglobin of horse heart, heme transfer to *Aplysia* metmyoglobin, 83
Arginase from zebra mussel, metal ions and, 111
Arginine complexes on DNA, binding structure, 131
$AuCl_3$ (Hpm), biological properties, 103
$AuCl_2$ (pm), biological properties, 103
Axial-base equilibrium, 2′,5′-dideoxyadenosylcobalamin and, 219

Binding modes, interaction between ruthenium(II)–polypyridyl complexes and calf thymus DNA, 141
Bismuth(III)-ciprofloxacin, antibacterial study, 241

Cadmium, platinum(IV) complex reaction with zinc–metallothionein and, 179
Cadmium-binding properties, glutathione, 29
Calcium, β-tricalcium phosphate and zinc vs., 259
Calcium transport, nickel as inhibitor in mitochondria, 227
Calcium(II), parvalbumin isoforms and, 67
Calf thymus DNA, interaction between ruthenium(II)–polypyridyl complexes and, 141
Captopril, gold(I)–, selenocyanate, selenourea, and thiourea interaction with, 197
Carbonate apatites, magnesium-containing, 1
α-Casein peptides, copper(II) binding ability, 19
Catecholamines, formation of unstable 2:1 and 3:1 complexes of iron(III), 165
Chromium nicotinate, characterization and structure, 119
Chromium(III) picolinate, characterization and structure, 119
Ciprofloxacin, antibacterial study, 241
Co—C bond dissociation energy, 2′,5′-dideoxyadenosylcobalamin and, 219
Cobalt(II), arginase from zebra mussel and, 111
Copper, acenaphthenequinone thiosemicarbazone and, 7
Copper-proteins, models, 57
Copper(I)–metallothionein, yeast *saccharomyces cerevisiae* identification and, 231
Copper(II)
  binding ability by α-casein peptides, 19
  binding by tetraalanine, 45
  quinolone and, 77
  saccharide complexes, metallothionein synthesis and, 37
Copper(II) complexes, α-amino acid dithiocarbamates and, 213
Copper(II) ions
  amino acids and, 131
  oligopeptides binding to, α-hydroxymethylserine residue and, 193
Cytochrome *c* oxidase, inhibition by nitric oxide using S-nitrosoglutathione, 207

2′,5′-Dideoxyadenosylcobalamin, thermal decomposition, axial-base equilibrium, and Co—C bond dissociation energy, 219
DNA
  amino acid copper(II) complexes and, 131
  calf thymus, interaction between ruthenium(II)–polypyridyl complexes and, 141

Enzyme inhibition, xanthine oxidase treatment with ethylisonitrile, 63
Escherichia coli, adenine and adenosine derivatives of tetraacetatodiruthenium (II,III) cation and, 175
Ethylisonitrile, xanthine oxidase from, 63

Ferric siderophores, NADH/FMN-dependent reduction, 247
Ferritin, purification and characterization from alfalfa seeds, 23
D-Fructose, metallothionein synthesis and, 37

D-Galactose, metallothionein synthesis and, 37
GDP/GTP exchange reaction, *ras* p21 protein and, 99
D-Glucose, metallothionein synthesis and, 37
Glutathione, cadmium-binding properties, 29
Gold(I)–captopril, selenocyanate, selenourea, and thiourea interaction with, 197
Gold(III) complexes, biological properties, 103

B-Hematin, production and properties, 145
β-Hematin, production and properties, 145
Heme–globin complex kinetics, 83
Heme oxygenase activity
  retinoic acid and, 153
  SN–proto-porphyrin and, 153
Human serum albumin, interaction with rhodium, 187
α-Hydroxymethylserine residue, binding of oligopeptides to copper(II) ions and, 193

0162-0134/97/$17.00
PII S0162-0134(97)00038-X

Iproplatin, and sodium chloroplatinate interaction with metallothionein, 159
Iron, acenaphthenequinone thiosemicarbazone and, 7
Iron(II), quinolone and, 77
Iron(III), formation of unstable 2:1 and 3:1 complexes of catecholamines and, *165*

Lysine complexes on DNA, binding structure, 131

Magnesium, apatite lattice and, 1
Magnesium-containing carbonate apatites, 1
Magnesium(II)
arginase from zebra mussel and, 111
GDP/GTP exchange reaction of ras p21 protein and, 99
Maltose complexes, metallothionein synthesis and, 37
Metal complexes, acenaphthenequinone *thiosemicarbazone and, 7*
Metal ions
arginase from zebra mussel and, 111
ferric siderophore reduction assays and, 247
phosphotransferase activity of alkaline phosphatase and, 51
sugar conformation and binding, 253
Metal–quinolone compounds, synthesis, crystal structure, and characterization, 77
Metallothionein
copper(I)–, yeast *saccharomyces cerevisiae* identification and, 231
sodium chloroplatinate and iproplatin interaction with, *159*
Metallothionein synthesis, saccharide complexes of copper(II) and, *37*
Micells, solubilization of insoluble model complexes and, *267*
Mitochondria, nickel as inhibitor in calcium transport, *227*
Molybdenum cofactor model, electrochemical and spectroscopic studies, *267*
Molybdenum hydroxylases, mechanism of action, 267
Mononucleotides, Tl^+ interaction with, 253
Mussel, arginase from zebra, metal ions and, 111

NADH/FMN-dependent reduction, ferric siderophores, *247*
Nickel
acenaphthenequinone thiosemicarbazone and, 7
calcium transport inhibition in mitochondria and, 227
Nickel(II)
arginase from zebra mussel and, 111
binding by tetraalanine, 45
Nitric oxide, inhibition of cytochrome *c* oxidase with *S-nitrosoglutathione and, 207*
S-Nitrosoglutathione, cytochrome *c* oxidase inhibition by *nitric oxide using, 207*
Nutritional supplementation, chromium(III) picolinate *and nicotinate and, 119*

Oligopeptides, binding to copper(II) ions, α-hydroxymethylserine residue and, 193

Parvalbumin isoforms, from tail muscle of the American Alligator, 67
Peptides
α-casein, copper(II) binding ability, 19
copper(II) and nickel(II) ion binding by tetraalanine, 45
Phenylalanine, parvalbumin isoforms and, 67
Phosphotransferase activity, alkaline phosphatase and, 51
Plant ferritins, purification and characterization, 23
Platinum(IV) complexes
biosynthesis of metallothionein with sodium chloroplatinate and iproplatin, *159*
native Cd, zinc–metallothionein in vitro, and, 179

Quinolone
antibacterial study, 241
metal ion interactions, 77
Quinolonecarboxylic acids, metal ion interactions, 77

ras p21 protein, GDP/GTP exchange reaction and, 99
Retinoic acid, synergy and heme oxygenase activity, 153
Rhodium, interaction with human serum albumin, 187
D-Ribose, metallothionein synthesis and, 37
Ruthenium, adenine and adenosine derivatives of, 175
Ruthenium(II)–polypyridyl complexes, interaction *between calf thymus DNA and, 141*

Saccharide complexes, copper(II), metallothionein synthesis and, 37
Selenocyanate, interaction with gold(I)–captopril, 197
Selenourea, interaction with gold(I)–captopril, 197
SN–proto-porphyrin, heme oxygenase activity and, 153
SOD-like activity determination, copper(II) complexes with α-amino acid dithiocarbamates and, 213
Sodium chloroplatinate, and iproplatin interaction with metallothionein, 159
Strontium, β-tricalcium phosphate and, 259
Sugar conformation, metal ion binding and, 253

Tetraacetatodiruthenium (II,III), adenine and adenosine derivatives of, *175*
Tetraalanine, copper(II) and nickel(II) ion binding by, 45
Tetraamino-tetrathioether ligands, copper complexes of, 57
Tetrapeptides, coordination abilities, *45*
Thermal decomposition, 2′,5′-dideoxyadenosylcobalamin and, *219*
Thioether-amine ligands, copper complexes of, 57
Thiosemicarbazone, acenaphthenequinone, 7
Thiourea, interaction with gold(I)–captopril, 197
Tl^+, interaction with mononucleotides, 253
β-Tricalcium phosphate, isomorphous substitutions, 259

Voltammetric data, cadmium-binding properties of *glutathione, 29*

Xanthine oxidase, ethylisonitrile and, 63
D-Xylose, metallothionein synthesis and, 37

Yeast *saccharomyces cerevisiae* identification, copper(I)–metallothionein and, *231*

Zinc
acenaphthenequinone thiosemicarbazone and, 7
vs. calcium in β-tricalcium phosphate, *259*
